

Introduction

There is lot of crimes in America the number crimes is increasing by the time so here , we want to move our store to place the have less crimes and more safe so this will be our main task focus on using the data that are provided through police department we will divide the areas and cluster them to determine the best option for moving our business

Problem

If someone is looking to open a restaurant, where would he open it?

So, there is a recommendation needed for the owners of the restaurants so we will try to analyze and understand the data to extract the best area and t
